

Micro Blading Pre-Treatment Advice

Please read carefully - Vital Information

- **For all clients whom want to have permanent cosmetic makeup procedures performed:**
We only use the very finest, sterile pigments available. They **do not** contain **IRON OXIDE** and are **MRI safe**. Even though we combine this with the most advanced application techniques for our permanent makeup procedures, some of these procedures need to be repeated because the original application can fade anywhere from 25% to 50%. Individual chemical and genetic skin can affect the final result.
- **We cannot accurately predict how much fading you might experience with your procedure.**
We sincerely hope that you are one of those lucky individuals who get perfect results with only one application, but this cannot be guaranteed. Please remember that the amount of pigment you retain or lose after your initial application is not a reflection of the quality of Megan Holliday's work. In case your procedure must be repeated, you have to wait at least 42 days (6 weeks) from the date of your original application.
- **Under no circumstances can an application be repeated within a time frame of less than 42 days (6 weeks).**
- The tissue is **not ready** to absorb new pigment.
- **Prices quoted for your permanent makeup is for your original permanent makeup procedure.**
- Not all customers need touch-ups.
- **If a touch-up is needed, you will be charged half of the original price listed on our pricelist of the specific procedure you need a touch-up on.**
- Touch-ups are done in the same time as your first procedure.

- Since delicate skin or sensitive areas may swell or redden slightly, it is advised that you are not to make social plans for the same day.
- Electrolysis should not be done at least within 2 weeks prior of your procedure. Do not resume method of hair removal for 2 weeks after the procedure.
- Do not dye eyelashes or eyebrows 1 week prior to procedure. Wait at least 2 weeks after the eyebrow procedure before dyeing lashes or brows.
- **Do not drink coffee the day of the procedure.**
- Avoid alcohol for a few days (at least 3) prior to the procedure.
- Please take x2 Myprodol (or generic) capsules an hour before the procedure to make the procedure more comfortable.
- If you have any laser treatment done after the permanent makeup, make sure the permanent makeup areas are covered. (toothpaste or zinc oxide which is sun block)

Medication NOT to be taken for 7 days before your permanent makeup Procedure:

These will interfere with the anesthetic and you will not numb.

- **Vitamin B12**
- **Any diet Pills**
- **Slimming mixtures**
- **Caffeine**
- **Anything that keeps you awake during the day**
- **Omega 3, 6 & 9** – thins your blood and all pigment will bleed out, It also causes bruises and swelling.
- **Asprin or Ibrufen** - thins your blood and all pigment will bleed out, It also causes bruises and swelling. (Please note Myprodol tablets do not contain these)

Micro Blading Aftercare Advice

Please read carefully - Failure to follow the post treatment instructions may result in loss of pigment, discolouration and/or infection.

For 14 Day (2 weeks) following permanent makeup procedure:

- Do not expose the treated area to the sun.
- You may apply makeup over the treated area. No other substance should be used to remove makeup, especially oil based products.
- Use absolutely no cleansing creams or chemicals. Gently cleanse the treated area with mild antibacterial soap. Do not pick at the epithelial crust. Allow it to flake off on its own.
- Do not soak the treated area in the bath, swimming pool or hot tub.
- Do not swim in fresh, salt or chlorinated pool water.
- Do not expose the treated area to the full pressure of the water in the shower.
- Apply ointment (Bepanthen bum cream); Grape seed; Medical coconut oil) at least 3 times a day using an eardrop – do not use your finger. Apply aftercare especially after cleansing your face and before bedtime. Keep the area moist at all times (after 2 day dry healing), if the permanent makeup becomes too dry, the pigment will not retain in the skin.
- Electrolysis should not be done at least within 2 weeks of the procedure. Do not resume method of hair removal for 2 weeks after the procedure.
- Wait at least 2 weeks after the procedure before dyeing brows or lashes.

Remember, colours appear brighter and more sharply defined immediately following the procedure. As the healing progresses, colours will soften. Makeup may be used to tone down the colours until this time.

Eyebrows:

- 1. Dryness and itching in the treated area**
- 2. Flaking**
- 3. Tenderness**
